

## Communication Skills

---

### A quiz for NSW palliative care volunteers

This quiz is based on Chapter 4 of *Palliare: A handbook for palliative care volunteers in NSW*

**Select the correct response to each of the following questions:**

- The aim of communicating with a patient is:
  - To build a supportive relationship with the person.
  - To avoid insincerity, or being overly intimate, or power struggles.
  - To become friends with the person and their family.
  - To identify clinical goals for the person in palliative care.
  - Both a and b above.
- Conversation is inherently intimate, so in working with patients conversation is probably not the best approach. Is this true or false?
- Effective communication:
  - Is attentive to the person's total message, both verbal and non-verbal.
  - Requires the volunteer to be fully present, not distracted by their thoughts.
  - Is enhanced by the volunteer being a calm and attentive.
  - Involves careful attention to the context of the relationship.
  - All of the above.
- Which of the following techniques will make your listening more effective:
  - Don't ever break eye contact.
  - Try and feel what the speaker is feeling.
  - Help the speaker finish the sentence.
  - Try and interpret what the speaker is saying.
  - All of the above.
- You have been asked to assist a person with an intellectual disability who is attending a clinic and you find their speech hard to understand. The best approach is to:
  - Pretend that you can understand them and change the subject.
  - Ask them to repeat themselves or to use different words.
  - Communicate solely with their support worker.
  - Speak more slowly to them, in a loud voice.
  - None of the above.
- A person has just been given a grim diagnosis. You are with them in the hours after they get the bad news. You respond by saying:
  - "That's nothing, my husband's cancer was much worse than that"
  - "Don't worry, you'll be fine, try and not think about it"
  - "It's probably because you've been a smoker all your life"
  - "Poor thing, you look ghastly"
  - None of the above.
- People in a coma cannot be roused but may be able to hear and sense your touch. Is this true or false?
- If a diagnosis has brought intense feelings to a person then it is likely that they may have misinterpreted the information given to them. Is this true or false?
